

Ikhsanuddin Syamsuri

SENIOR SOFTWARE ENGINEER

mail.ikhsanuddin@gmail.com | linkedin.com/in/ikhsanuddin | github.com/ikhsanuddin | ikhsanuddin.com |

Jakarta, Indonesia (UTC+7)

PROFESSIONAL SUMMARY

Senior Software Engineer with 10 years of building web products, fully remote with Singapore and US teams since 2023. At Boon, I own AI-assisted preconstruction features end to end in React and Ruby on Rails, on a takeoff system that handled 70,000+ runs in 90 days, and I led the Takeoff V2 move to a Pixijs/WebGL canvas.

WORK EXPERIENCE

Boon (getboon.ai), United States, remote

February 2026 - Present

Full-Stack Engineer

- Build AI-assisted product features for construction preconstruction workflows, including document analysis and bid generation, on a takeoff system that handled 70,000+ takeoff runs in 90 days. Customers report bill-of-materials prep dropping from 2-3 days to about 1.5 hours.
- Built the guided onboarding for new Boon Agent users, including generated use-case tiles, a default-deny integration contract for skill runs, and trial-scoped OAuth.
- Led the Takeoff V2 move of the blueprint canvas from a React component graph to a Pixijs/WebGL renderer, with an rbush spatial index, a tiled rendering pipeline with level of detail, and crisp zoom at V1 parity.
- In the V2 prototype, on a page with 1,366 annotations, cut click-to-select from 591 ms to 1.9 ms, took panning from a 45-second freeze to 55.7 fps, and cut JS heap from 222-244 MB to 116 MB.
- Planned and measured the trial funnel and its metrics, with Amplitude instrumentation and UTM attribution.
- Contributed to 65% of the third-party integrations, including Procore, Egnyte, Outlook, and Google.

Undercurrent Technologies Pte Ltd, Singapore, remote

September 2023 - December 2025

Full-Stack Developer

- Owned 5 backend services in TypeScript and Go for a decentralized exchange platform.
- Designed and implemented Telegram-based applications integrated with Web3 wallet services, enabling secure user transactions for a Telegram community of 25,000+ members.
- Delivered Phaser.js game features as daily active users grew from 3,000 to 6,000.

TwoSpaces

April 2022 - April 2023

Technical Lead

- Led end-to-end delivery of 6 projects, from planning and architecture to deployment and monitoring: payment gateway, merchant, and property management services, a third-party IoT integration, marketing metrics, and a website rebuild.
- Moved deployments from manual releases to CI/CD with zero downtime, migrated services from standard VMs to Kubernetes on AWS, and set a weekly release cadence.
- Led 2 junior engineers and worked alongside 2 seniors, mentoring through code reviews, pair programming, and technical guidance.

Tekno Kreasi Nyata

November 2018 - April 2022

Technical Lead (2021-2022), Lead Frontend Engineer (2019-2021), Senior Frontend Engineer (2018-2019)

- Led a 14-person engineering team (4 frontend, 5 backend, 2 database, 1 DevOps, 2 QA), setting technical direction and enforcing coding standards.
- Analyzed a client's financial reporting system and proposed moving it to Kafka and microservices, scaling it from 5,000 to 100,000 incoming transactions per minute.
- Led the frontend team as it grew from 1 to 4 engineers, having joined as the company's first employee.

Coconutlab

September 2018 - February 2019

Senior Frontend Engineer

- Built and shipped ULO (ulo.life), a production React Native mobile app with 10,000+ downloads.

Yamisok

May 2016 - September 2018

Senior Frontend Engineer (2017-2018), Junior Software Engineer (2016-2017)

- Built a gamer portal for online tournaments used by 4,000 players, with brackets, feeds, realtime chat, and marketing email.

EDUCATION

Bachelor's Degree in Industrial and Organizational Psychology Universitas Mercu Buana

2013 - 2017

SKILLS

Languages: TypeScript, JavaScript, Go, Ruby, PHP, Dart

Frontend: React, Next.js, Vue.js, Nuxt.js, Svelte, Pixijs, Phaser.js, HTML, CSS

Backend and data: Node.js, Ruby on Rails, REST APIs, GraphQL, WebSockets, PostgreSQL, MySQL, MongoDB, Redis, Firebase

Cloud and DevOps: AWS, Docker, Kubernetes, Terraform, Ansible, GitHub Actions, CI/CD
